- Web based E-solutions
- Technology Innovations
- Mobile Computing Solutions

Breaking from the traditional way of doing business, we adopt a consultative manner of offering solutions, understanding and appreciating the fact that customer solutions require personalization rather than customization. We sit on the side of our customers to understand their needs, applications and requirements, identify, select and offer a solution that provides the best fit to our client's requirements.

We support our customers through the entire project cycle, starting from the requirement definition, to selection of a client requirement specific solution, implementation, commissioning, training, maintenance and operation support.

Our lean operations allow us to operate at low margins and we pass on all the competitive edge in pricing to our customers.

The focus of our operations is your business, with the objective to Deliver Value.

MOBILE NETWORK RESOURCE RE-ENGINEERING

We help Mobile telephony and data operators improve their network quality and operations efficiency through Network Resource Re-engineering using IT Technologies for Network Planning, Design, Maintenance and Optimization. The solution uses our principals invented and patented set of methods to build mathematical models, and incorporate statistical analysis to describe users' mobility behavior based on actual network data. Based on Mobility and Traffic models, we assist operators to re-allocate network resource reasonably under following situations –

- Daily Network operations and maintenance
- Network expansion and network resource re-allocation
- Special events creating huge mobility and traffic dynamics

Our solutions have already been proven across GSM/GPRS/UMTS/CDMA2000 networks, optimized some of the busiest networks in the world saving our clients millions of dollars, improving network performance, increasing customer satisfaction and revenues materially.

With the Mobility-Based Optimization® solution we provide and our wealth of knowledge and deep understanding of the traffic issues an operator is likely to face, we have effectively reduced and minimized traffic loads in circumstances that include large subscriber increases, managing multi-vendor, multi-generation networks, huge volumes increases in SMS traffic, network integrations, special events leading to traffic surge.

Technology at work for you

INFORMATION CONTENT MANAGEMENT | ECM | EDM | WORKFLOW | BPM

Today's Knowledge Economy is causing an Information Overload for companies which is a major challenge to manage. Information Content has changed to include different types and format – Email, electronic files of different formats including ERP and other back-end applications, drawings, audio and video files besides legacy paper documents. Huge volume of important documents need to be secured and stored for easy retrieval on demand. Large and continually increasing paper data volumes cause information security issues - losses due to unauthorized access, fire hazard, important documents get misplaced, theft, Water Blots, Pager aging and deterioration, etc. These physical archives also occupy large physical space – *which is at a premium!*

80% of digitized information in a typical company is unstructured data such as documents, e-mails, and images. Such content is growing by 50 % every year. Organizations use multiple systems to house unstructured content created during the normal course of doing business. Additionally, having content in multiple places makes it very difficult to share content across the enterprise and outside the firewalls with customers, partners, and suppliers. 15 – 20% of operating revenue is spent fixing problems that stem from bad data. 40% of an average office worker's time is spent trying to manage or repurpose unstructured data.

The solution for better and efficient Information Management is our integrated enterprise content management system - **GARGANTUA.**

Typical daily operational problems faced by organizations in managing the information in their office are –

- Have increasing difficulty in managing ever increasing papers and files in the offices.
- Employees waste a great deal of their productive time in retrieving and filing documents.
- Inaccuracies and errors searching through large reports and files for information
- Dependency on paper files results in needless duplication, increasing costs and creating disorder
- Valuable Resources and man hours are wasted faxing and re-faxing documents Our Enterprise Content Management solution can help companies easily manage these daily problems in a cost and time efficient manner, improving operational efficiency and driving profitability.

flexible solutions for your business needs

IT STAFFING SOLUTIONS

Human Capital is the most important resource for any organization. Companies are not its products, offices and accounts but what its people make it to be. Finding, identifying, selecting and retaining the best resources for your organization can be a challenging task. Current situations in the region with problems of Visas and other related issues result in Businesses spending their precious productive time in managing HR related issues, distracting from the Core business at hand. Being a technology company ourselves we understand how important good technical resources are for the success of your operation and we also understand how challenging this task is. We are not a Body shopping company but being a technology company from the region and having faced and successfully met these resource challenges, we provide a number of options for big technology enterprises in the region to meet their IT staffing requirements –

Executive Search: Using our global partners and offices we can find, identify, screen and offer the best technical executive and Management talent for your selection. Our Screening process ensures that the resources proposed not only meet your requirements in aptitude but also have the right attitude and flexibility to seamlessly merge into your work environment and positively impact your operations.

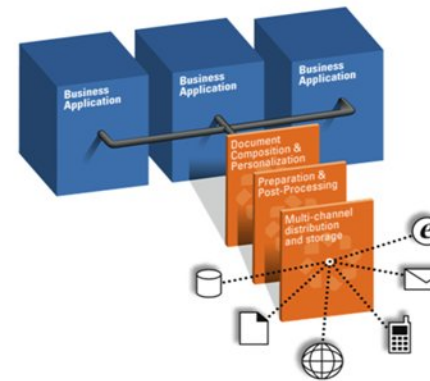

Resource In-sourcing: Based on the above model, however here we offer the selected resource under our Visa, financial obligation and sponsorship to work directly under the management of our clients for an all-inclusive monthly cost. This frees the client operations from all the hassles of managing the HR related issues and allows them to effectively call-out or call-off resources, as required to meet their objectives more efficiently.

Short-term Insource / Outsource: Frequently organizations need to hire resources for a short period to meet project demands or for deployment of tasks. We help out our clients in such situations by in-sourcing efficient technical resources on short term temporary assignments or if we can interest the client can complete the task remotely for the client on an Task outsourced model on a Time & material or Fixed cost basis.

ENTERPRISE OUTPUT MANAGEMENT

Highly sophisticated information management systems have become imperative in the Operations and management of all professional organizations today. Automation Systems for Enterprise Output Management provide tremendous returns on their investment by improving operational efficiencies, minimizing administrative tasks and eliminating superfluous costs and wastages. More importantly flexible control over your output brings organizations superior Marketing advantages that allows them to selectively target its customer base and improve customer perception of the service offered – using your existing communication channels with your customers – reducing advertising cost – reaching the required customer for the relevant product directly and this increased efficiency keeps your operations ahead of the competition.

Customers perceive your service-quality level based in part, on how effectively, responsively and accurately you produce communication. Boost all three qualities with our robust, flexible output management systems and processes, and -

- Personalise communication by integrating critical data into documents and e-forms you design once, then distribute anywhere via the channel a customer wants.
- Create secure corporate style, easily creating and adapting forms and other types of documents to meet ever-changing regulations and manage documents centrally. Add impact to business documents like financials and securities statements aimed at high-value customers (those 20% who account for 80% or more of company profits).

• Consolidate fragmented data from separate repositories; link to all your critical ERP and legacy systems including SAP; enjoy easy personalised document composition and central content management for all document building blocks.

• You can link branches and offices to central document production facilities, and reduce your document-related costs, only 5-15% of which are in printing. The rest is in creation, distribution, warehousing, handling, quality control, searching and archiving.

• Optimise and integrate bulky production printing and transactional printing with back-office systems including high-quality finishing with secure process efficiency; automatically collect, sort, assemble and distribute documents -on paper or electronically; automatically route large front-office jobs to print rooms, providing greater efficiency and driving higher communication quality.

Create Enterprise Output

Clear, concise, consistent, & relevant

Mobile Network | Repeater Systems

Wide range of Band Selective and Channel Selective **SMART Repeater Systems** for Mobile Telephone networks. Unique and exclusive Intelligent Mode Auto configures Repeaters and prevents any interference to the Mobile Network now or in the future.

Comprehensive Remote Monitoring system Configures, Monitors, Diagnoses and Notifies on System Health and easily interfaces to Operators OSS for Central Control and Monitoring of Repeaters with other Network Elements. Easily Enhance Network Coverage with Minimal Time and Cost Investment.

Remote IP WAN Management

Unique unified Network Management Platform for Fixed Line and Mobile IP devices based on TR069 and OMA-DM standards.

Auto detect and Auto configure CPE Devices and Services behind it. Configure, upgrade, Monitor, Diagnose Report IP based CPE Devices and Services Remotely. Save Cost—Time and effort. Ideal for Broadband Bandwidth and Service providers.

CUSTOM SW DEVELOPMENT

We help clients by taking up bespoke offshore software development tasks using our own offices and partners in India. SW built to client specification developed in compliance with internationally benchmarked standards.

Reduce Cost to Develop -Time to Market - Time to Change - Cost to Maintain.

WEB E-SOLUTIONS

As part of our COTS offering we provide our customers a varied range of Web Based e-solutions to manage different aspects of their enterprise operations. Solutions offered are for Vendor Relations management and e-procurement, SLA Monitoring and Performance Evaluation, Help Desk Management solutions, Transport Fleet management Solution.

MOBILE COMPUTING SOLUTIONS

Technology provides the gears which run modern day enterprises. Companies invest heavily in implementing ERP and other technology solutions to improve Operational Efficiency. We provide a range of Mobile computing solutions to extend this back-end computing applications to the last mile in the field. Retail and Industrial solutions for in-field Data gathering or dispensation - solutions for Van Sales, Field Service, Field Inspection services, Time management, Project Management....
